

Séria 24 webinárov pre ARM Cortex-M mikrokontrolér, pod taktovkou experta Trevora Martina.

img src: [Hitex news](#)

Cortex-M knowledge in compact form

- [Session 1: Introduction & architecture](#)
- [Session 2: Interrupts, exceptions and memory protection unit](#)
- [Session 3: Software interface standard \(CMSIS\)](#)
- [Session 4: Debug support](#)

Using a real time operating system

- [Session 1: First steps with an RTOS](#)
- [Session 2: Threads](#)
- [Session 3: Inter-thread communications](#)
- [Session 4: Design techniques](#)

Middleware with Cortex-M

- [Session 1: Middleware overview and file system](#)
- [Session 2: Networking component](#)
- [Session 3: USB component](#)
- [Session 4: GUI component](#)

Designing IoT Devices with ARMv8-M

- [Session 1: IoT threats and mitigation](#)
- [Session 2: The Cortex-M33 processor and TrustZone](#)
- [Session 3: Creating a TrustZone program](#)
- [Session 4: Platform Security Architecture and Trusted Firmware](#)

Secure communications for Arm microcontrollers

- [Session 1: Security services](#)
- [Session 2: Public key cryptography](#)
- [Session 3: Transport layer security](#)
- [Session 4: IoT protocols](#)

Experts guide to Cortex-M software development

- [Session 1: Software architecture](#)
- [Session 2: Customising the debugger](#)
- [Session 3: Software packs](#)
- [Session 4: Looking to the future](#)
