Welcome to AVR Studio 4.17 (07/2009)

## Part support

The following (19) new parts have been added to AVR Studio since 4.16 SP1:

- ATtiny4, ATtiny5, ATtiny9, ATtiny87, ATtiny261A, ATtiny861A, ATtiny2313A, ATtiny4313, ATmega644PA, ATmega16HVB, ATmega16M1, ATmega64M1, ATmega64C1, ATmega8U2, ATmega16U2, ATmega32U2, ATxmega192D3, AT90SCR100, ATmega128RFA1

## New Features

Full AVR ONE! 8-bit support. Both programming and debugging.

AVR Battery Studio version 1.02

JTAGICE mkII command line sw with support for ELF production file format

STK500 command line sw with support for ELF production file format

## Bug Fixes

\* Fixed issue with non-working simulator in RC1.

6093 USB driver installation on Windows Vista x64. Upgraded to latest Jungo driver.

7001 Known issues states that 64bit USB in Vista is not supported

9713 Error Code: -2147467259 when opening a project

9751 Error in registerview. Register gets overwritten with wrong values when a neighbour register is edited.

9508 I am not asked if I want to reload project even if it has changed

9447 Creating ELF files from AVR Studio, not possible to omit a memory type.

8003 jtag programming hangs when using .elf format without EE-file

85 JTAG ICE mkII does not release Reset

9773 Writing a .hex file to the AT90USB1287 using "Tools"->"Program AVR" function works indeed, but transferring the .elf file does not.

9609 In AVR Studio4.16 b628 ATmega329P signature vaires in .xml file from the Datasheet

8845 Wrong BOD levels in the XMEGA part description files.

9792 jtagiceii.exe does not support ELF production file format.

8220 "Preserve EEPROM contents when reprogramming device" is not working for XMEGA devices

9704 The libdwarf library used in AVRStudio is outdated. Updated to latest version.

9508 I am not asked if I want to reload project even if it has changed

9647 Errors in ATmega16U4, ATmega32U4 and ATmega32U6

9614 AVRStudio crashes when loading elf file

9701 libdwarf limits the number of standard opcodes for linenu...

10026 Infinite loop when loading objectfile

10099 Help pages for JTAGICE mkII show display error when pressing help button after a JTAG mode error

10114 Auto functionality in programming dialoge fails when program and read the FLASH / EEPROM

## Note

Windows 95 is no longer supported by AVR Studio. The most recent version that supported Windows 95 was AVR Studio 4.12 SP3.

Windows 98 is no longer supported by AVR Studio. The most recent version that supported Windows 98 was AVR Studio 4.16 SP1.
