- [Code Composer Studio 4.0 Preview](#)

[Release Notes](#)

Getting a License: You need a license to use CCS. There are many types of licenses for CCS. The [licensing](#) topic goes into more detail. If you download the platinum image you can choose to activate a 30 day evaluation license, or a free license for using EVMs, DSKs, simulators and XDS100 class emulators or you can use the activation code that you receive when purchasing CCS to activate a full license. The [activation](#) topic walks through the activation process. If you are using the MCU Core download it will automatically generate a license on installation and no user action is required. If you have any issues with license file generation please contact [\[email\]](#).
